DETAILED ACTION

1. Claim 1 has been examined.

Specification

2. The abstract of the disclosure is objected to because it is not in the proper format. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 4,742,662 to Smith.

Art Unit: 3635

Smith clearly shows in Figures 8-11 and the specification (column 4, lines 47-68) a clip (item 32) consisting of a base (item 90) with two pair of upper securing flanges (items 94 and 96) that has one flange having an upwardly bent end and the other flange having downwardly bent end. Smiths disclose that the securing flanges (items 94 and 96) are used to secure a wall-mounting clip (item 32) to a wall-masking rail (item 34).
